

Water specifications

- The water source is Namadaw Creek. Water will be stored in a 50,000 gallon tank for the buildings and a 10,000 gallon tank for the factories.
- While we do not know the size of this creek, having it as the water source appears to exclude the site from being a yellowcake mill or reactor site. Of note, though, the overall plans included two hydroelectric dams for the creek (see Topographical map detail).
